It happens all the time - you want to remove a negative image from a scanned photo or contact sheet, and honestly it doesn't work. The basic problem is that when you've scanned or photographed a negative you aren't dealing with a regular image file. The scanner or camera will measure light in large amounts, and when you put it in a program to make a positive, the program converts the light to dark areas. This is why you have to use software to remove negative images, but it can be a little tricky. You can remove negatives from your photos by using Photoshop, but it is probably easier to just shoot a new image.

Also in this release, you can now merge images in XD (Windows) or FBP (Mac) files without a previous conversion. Overall this update seems less important than if the features weren't added to FBP or XD, because key people using these applications should have already had them for years. However, a Photoshop update, especially one specifically aimed at professional photographers, makes sense. Thus, I think it's an important addition for both users of these programs and for Photoshop itself.

Photoshop CC 2018 offers a new way to experience 3D artwork. It is easy to create and edit sophisticated 3D artwork, including 2D and 3D drawings, 3D text, and 3D video. It's up to you to decide whether to use 3D or 2D when designing your artwork, which is easy to switch to any time you want. Photoshop CC 2018 adds support for native autocomplete for 3D artwork, enabling you to immediately interact with your 3D artwork in real time and in context. Adobe has introduced a new, AJAX-based way to open and save projects, showing a preview of refreshed wireframes while you move between screens. This leads to some nice visual feedback. Meanwhile, the Output window offers another way to send your output directly to the Web without Adobe Bridge, which means you should no longer need to switch outputs to the right program and you don't need to annotate by hand. The best news for the non-Pixel users is that they can now independently control version history and comments, which allows for collaborative editing of the lens. Versioning lets you check out swatches and changes without risking the original, and commenting allows for the constant collaboration among team members.
