SharpDesktop Screenshots: Advertisements ]]> is the perfect application for your Dual Monitor usage 11 Jul 2012 13:12:25 +0000admin SharpDesktop is the perfect application for your Dual Monitor usage, because if you have it installed on your computer and you have two monitors, you can use it. SharpDesktop lets you create as many desktops as you need. You can navigate through them either from the main window buttons, or from the system tray. It would have been useful however, to be able to assign hotkeys for an even easier navigation method. What this application basically does is that it creates multiple clones of your desktop, but with no active window you have opened in the original. All files and folders can be found in each one, also you have the possibility to transfer windows between desktops. In case the application crashes for some reason, or it accidentally closes, everything is moved to the original page, so you won't lose any document that you forgot to save. In conclusion Taking everything into consideration, we can say that SharpDesktop is a handy utility that offers you much space to work with. In case there is no more room on your desk for another monitor, or you simply do not have another one, you can rely on this application to help you out. ## What's New In?

Takes care of all your desktop activities. Create new desktops, navigate them, close them, and activate windows within them. Cute Video Player allows you to play videos on your computer in the most pleasant way. Cute Video Player comes with a very simple interface and a few more features. Cute Video Player allows you to download videos from the Internet, and open these downloaded videos, and you can also play these videos and even drag and drop videos from the folder of your hard drive. Cute Video Player supports nearly all the video formats you can think of and even supports video encoding and decoding. This is a really good video player that is simple to use and very easy to install. PMLinux is a free open source POS (point-of-sale) application for Linux which supports over 40 languages. PMLinux is a great open source alternative to the Windows based applications like Zebra Point, Tiger Point, and i2 Technologies POS. There are many things you can do with this application, like split or join documents, print or manipulate images, and send an email, or a webpage, and so on. I like the fact that you can insert images from your web browser as a normal image inside a word document. You can resize the image and the document, and it will behave just as a normal picture inside a document. If you are looking for a free easy to use application to create spreadsheets, PMLinux is for you. Hello, I am a Linux newbie looking for some good tools to help me learn more about Linux and what I can do with it. I came across one interesting application called MySQL Workbench. It is an application to do a lot of things to the databases of mysql. I plan on studying it more and using it to help me understand more about databases and how to use them in Linux. It is written in java so should run on any type of Linux. You can use it to do a lot of things like backup and create or alter databases. It has a nice graphical interface and simple to understand. It has a lot of features and capabilities. It can connect to a MySQL database located on a windows machine using the network, as well as a Linux machine using the localhost. It has a few limitations. First, it is written in java, and thus it uses a lot of resources. Second, it can be a little bit difficult to use to create a good table structure for the database you want to use. Another problem is it is only available for Linux. That being said, I hope you find this application useful for understanding more about databases. Unable to use a folder as read only? Try adding a user group, or a specific group for that folder. I am not sure if you need to be a member of this user group or not. Unable
