What is Heron? Heron is an object-oriented scripting language and environment that is designed to be easy to use, even for those who have no programming experience. Its syntax is similar to Java, C#, Scala and ECMAScript, which makes it easy to use, even if you are a rookie. This portable version of the program can be run from any removable drive, without having to install it on the hard drive. The easy to use integrated development environment can be used to edit source code, while the Heron engine is designed to run any.heron file. Object-Oriented Programming Objects are the building blocks of programming. Each object is a class of items that are related to each other. An object is used to share data and methods with other objects. Classes and objects are the basic structures of Heron. Class names should describe the functionality of the class. Each object contains variables and methods for the purpose of using these variables and performing common operations. You can use Heron classes and objects in a similar way to classes and objects in other programming languages. With Heron's Object-Oriented Programming, your code is more compact and your programs are more easy to understand. Portable Languages Heron is portable and can be run from any removable drive. It's like a portable version of the program that is installed on your hard drive. You can use a portable version of Heron even if you don't have enough memory to install it on your hard drive. Heron's interface uses standard drag and drop to display the names of the classes, methods and variables that can be used to create, edit and run programs. To create and edit a.heron file, you only need to drag a class, variable or method from the GUI (Graphical User Interface) to a.heron file. The file will then be edited automatically. You can easily select any text in the.heron file to be pasted into a document. You can paste all or part of a document into a.heron file, and the original document will still be preserved.

Inheritance and Encapsulation In Heron, class objects are derived from parent classes, and methods are inherited. The child class inherits the methods and variables of the parent class, so only the new methods and variables will be visible to the child class. Inheritance provides the basis for object-oriented programming. In the above example, a class is derived from the parent class

Keyboard Trapped Keyboard Trapped - June 2019 - Community Update As you can see, while we are still hard at work, it's time to deliver an update and to let you know about some of the latest news and updates that are on their way. Some major changes are coming soon! Well, first of all, our community management team (led by @mattniemo) would like to welcome you and to thank you for your patience and loyalty over the last couple of years. A big Thank You to all of you who attended our first event, were there for the second, became a part of this adventure or simply thought about supporting us. A special Thank You goes to the kind people who came and donated to our campaign for a second event, without whom we would not have been able to pull off the event in the first place. We've also had some major news regarding Keyboard Trapped that we want to inform you about. As you may know, the event was planned to be held in London and in order to do so we had to find a venue that would be open to us and make sure that it was large enough to allow for a live audience and a reasonable number of people to enjoy the events. We were lucky to have found the venue, but unfortunately it was not in London itself and we had to move the venue to the city of Wolverhampton. This had serious consequences for us as the planned day would have been a public holiday in the UK, meaning the area we were planning to gather in would have been full of people. This would not have been a pleasant sight and we definitely do not want to put you in such a situation, so we have decided to reschedule the event until the following summer. This means that it will be the last event we'll be attending this year and we'd like to thank everyone who was looking forward to come to the event and support us. The problem that we've been facing for quite some time now is that we would have had to travel hundreds of miles to get to the venue, which would mean that there'd have been a lot of time and money involved. In order to make it happen we'd have needed to raise about two thousand pounds, something that we simply don't have in the budget right now. This is why we have decided to reschedule the event.
