The Photo Match tool helps you match photos. Sure, you can probably go to a photo booth and match photos, but that's inconvenient. With the Photo Match tool, you can even match content in your document and paste that content into your photo. Creating spot colors of the same type of content that you're matching is a great way to create a colorful document. Photo Match can only match similar photos. With the Gradient Map tool, you can find various formulas to create a cool gradient. This will make your photos look more unique. Use it with the Clone Stamp tool, and create the most beautiful backgrounds for your photos. If you don't want to learn all the keyboard shortcuts just yet, then you can turn off the Red Eye Removal tool under the Options panel. Then you can click on the dark areas of your image and turn off the Refine Edge tool, which will keep you from accidentally erasing your image's original photo retouching. It's really easy to find your work after you finish loading it in Photoshop. Once you set it up, you won't notice the file size and will simply see your work. With the Preferences window selected, click on the General tab in the left menu, scroll down until you see your file size and then hit the up and down arrows. A bar should pop up that indicates your file size. **How do you look for your work in Photoshop?**

When you open Photoshop, you'll find your images in the Project bin. You can view each project individually or in the Quick Collection by opening the last folder in the bin. 933d7f57e6

Here is what's new in Photoshop CS6. **App-based collaboration**. Shared files across screens and devices has been one of the most popular requests from our professional customers. With the introduction of Share for Review (beta). Photoshop is the most powerful and trusted app for collaboration, but users have been frustrated when leaving a file for review as they have to download a second app. With Share for Review(beta), you can file a request for a specific project in a place you already have a file and leave Photoshop on another device. The next person to want a review gets a notification, and immediately has access to it. When you are sharing for review, you can leave your Photoshop document open in the new API, giving the reviewer access to the same changes to the file. When the reviewer saves the document, all changes to both the original and the shared documents appear in the same place, saving everyone time and frustration. **New collaboration features**. Watch images and videos the way your customers watch them. With a new feature for watching images in real time, users can track viewing choices in real time—just like watching a movie.
