Just upgraded to Photoshop 7.1.1, and while it's a lot faster than 7.0.1, I'm not entirely pleased with it. Not only are the layout options changed, but so are the way the tools are disabled/enabled. For example, if you choose to change the priming/painting layer, the tools disappear ←of course it's easy to get around this, but I've been having a lot of trouble with it. Again just upgraded on my MacBook Pro. Still not sure how to get tooltips on the move. Only tools that have info e.g. Character, Paragraph, Button, background color should have tool tips. Not sure how I go about enabling this setting. In latest version it doesn't work at all. As far as the tools themselves go, having to reject images is essential to getting better work done. The ability to create grids, while a blessing, ultimately means that some images are just not practical to save, especially if they contain the slightest amount of movement, be it due to camera shake or wind blowing them during a shot. As we stated earlier, it is quite unexpectedly complex to apply a "move object" effect to a single image, so the grid becomes a necessity. There is no doubt that grids can be fitted into Photoshop's tool design, as they are meant for positioning objects, not for graphic design—especially not the latter. That is where the Lightroom program naturally excels. But then it introduces grid lines into your photos, which is a great move. But as we can see, it still forces you to do a bit of basic image editing cleanup. You need to get rid of those unwanted grid lines—separats types, if you want to get technical. For example, you can first turn grid lines on in Lightroom, then switch them off in Photoshop afterwards. Apart from the minor issues, the overall workflow and experience with the tools are exactly the same, so Photoshop's controls are something that should have been left alone. Believe me, I have tried. Perhaps this is something that could be done with just a setting where you choose to switch grid lines off or on. After all, there is no such thing as a default state in Lightroom. You can either leave grid lines on or off, and the same with the grid itself. Just one more thing that needs to be optimized in future versions.
